

Press release: Graffiti cleaning on buses and trains via app

Perchtoldsdorf, march 15th, 2021

For transport companies and also many passengers, buses and trains sprayed with graffiti are a nuisance. The works of sprayers on public transport vehicles are not to everyone's liking and often serve to spread extremist symbols or depictions. Rapid action is required here: graffiti must be removed as quickly as possible after it has been applied.

Graffiti can leave big holes in an operator's cleaning budget, because out-of-tour cleaning costs extra money and often disrupts timetables. The result: vehicles cannot be used as planned - and costs skyrocket.

DC.Transport's graffiti module reacts lightning-fast to soiling by sprayers and helps to ensure that vehicles can be cleaned quickly. This brings two advantages at once: First, buses and trains are quickly ready for use again without potentially legally questionable symbols being visible in public spaces for too long. Second, prompt cleaning ensures that aggressive paints cannot eat into the surfaces.

The process of graffiti cleaning controlled by an app is very simple: As soon as graffiti is discovered, it is reported to the cleaning staff. With the help of the app, the vehicles can be precisely located and cleaned immediately. For legally compliant documentation, the graffiti is photographed and stored in the cleaning app. As an additional, useful feature, the app also records the size, location and any symbolism of the graffiti. Once removed, the vehicle is sent on its way cleaned. Billing the cleaning companies is simple, traceable and transparent.
